

CONTENTS

Foreword	
40 years of scholarly work of Professor Stefan Kozarski	
Professor Stefan Kozarski's publications	
ABER J. S.: Landsat interpretation of glaciotectonic terrain and lineaments in northern and southwestern Poland	1
ALEXANDROWICZ S. W.: Malacofauna of the Holocene calcareous sediments in Grabowo near Koszalin (Pomerania, North Poland)	13
ANTCZAK-GÓRKA B.: Disappearance of the Warta river bifurcation in the southern section of the Poznań gap during the Late Vistulian	21
BAKER V. R.: Global paleohydrological change	27
BARSCH D.: Gedanken über die Zukunft der Geomorphologie	37
BOHNCKE S., KASSE C., VANDENBERGHE J.: Climate induced environmental changes during the Vistulian Lateglacial at Żabinko, Poland	43
BORSY Z.: Evolution of the north-eastern part of the Great Hungarian Plain in the past 50 000 years	65
BÖSE M.: Petrographical composition of the tills and glaciotectonic structures in the clay pit at Włoszakowice	73
BRUNSDEN D., IBSEN M.-L., LEE M., MOORE R.: The validity of temporal archive records for geomorphological processes	79
FRÄNZLE O. und U.: Vegetations und Standortwandel schleswig-holsteinischer Landschaften unter dem Einfluß menschlicher Nutzung	93
GÓRSKA M., KACZMAREK L.: Directional elements in the Vistulian lodgement till in the central Great Poland Lowland	101
GREGORY K. J.: The increased significance of vegetation on river channel dynamics	117
JAHN A.: Some remarks on hydrographical changes in the Sudety Mountains	121
JUVIGNÉ E., MOORS Ch.: Géochimie et minéralogie du loess de Moyenne Belgique orientale	125
KARCZEWSKI A.: Contemporary glaciation of the Petuniabukta area against the background of Late-Vistulian and Holocene deglaciation (Western Olav V Land, Spitsbergen)	133
KASPRZAK L.: Quantitative sedimentation model of Vistulian ice-sheet: a theoretical approach based on field observations	141
KLIMEK K.: The role of drainage basin orography in the river channel pattern transformation during Late Vistulian, Subcarpathian Oświęcim Basin, Poland	147
KOSTER E. A.: Progress in cold-climate aeolian research	155
KOSTRZEWSKI A., ZWOLIŃSKI Z.: Hydraulic geometry of a supraglacial stream, Ragnarbreen, Spitsbergen	165
KOTARBA A.: Rapid mass wasting over the last 500 years in the High Tatra Mountains	177
KOWALKOWSKI A.: Catena of podzolic soils on the northern slope of Västerskutan in the Massif of Åreskutan, Jämtland	185
LAGERLUND E.: Ice dynamics during the deglaciation of SW Skåne, South Sweden	195
LAUTRIDOU J.-P., COUTARD J.-P.: Le probleme de l'extension et de la profondeur du pergélisol pléistocène en Normandie (France du Nord-Ouest)	201
LAVRUSHIN Y.: A genetic classification of deposits of the glaciofluvial flows	205
MANIKOWSKA B.: Weathering of heavy minerals in podzol soil profiles on aeolian sands in Central Poland	209
MYCIELSKA-DOWGIAŁO E., PEKALSKA A., WORONKO B.: The evolution of a marginal form and of kames in the region of Bielsk Podlaski. Sedimentological analysis of deposits	215
NIEWIAROWSKI W.: Diagnostic features of subglacial channels of glacial and glaciofluvial origin, exemplified by channels of the Chełmno-Dobrzyń and the eastern Gniezno Lakelands	225
NOWACZYK B.: The age of dunes in Poland – selected problems	233
PISART A.: Deux types de versants périglaciaires de haute Belgique	241
RAUKAS A.: Estonia – a land of big boulders and rafts	247
STANKOWSKI W.: Taxonomy of glacials and disharmony of glaciations	255
STARKEL L.: The pattern of the Holocene climatic variations in Central Europe based on various geological records	259
SZCZYPEK T.: Anthropogenic relief in the eastern part of the Silesian Upland	265
